

Рис. 5. Зависимость вероятности ошибки второго рода β от размера выборки n для тестов МДРП(4), МДРП(5) и МДРН(4):
 $H_1 = MC(3, 1)$, $\alpha = 0,01$, $\delta = 0,005$

Fig. 5. Type II error probability β plotted against the length n of the binary sequence for the tests of multidimensional discrete uniformity by overlapping 4-tuples (МДРП(4)), by overlapping 5-tuples (МДРП(5)), and by non-overlapping 4-tuples (МДРН(4)):
 $H_1 = MC(3, 1)$, $\alpha = 0.01$, $\delta = 0.005$
